

GENERAL INFORMATION

DRUMMOYNE CLINIC

SPECIALIST EYE CARE FOR PATIENTS

Our friendly, well-established clinic offers high-quality, affordable care to the local community and surrounding suburbs. Patients with retinal conditions, glaucoma, cataracts and more general eye conditions can access treatment from a highly regarded team of ophthalmologists equipped with the latest technology.

Our state-of-the-art facilities include consulting rooms and treatment rooms, and we are equipped with an optical coherence tomography (OCT) system for detailed imaging of the retina.

We always endeavour to accommodate emergency situations – please call the clinic if you require urgent eye care.

Fully accredited

Vision Eye Institute is committed to continuously monitoring and improving customer service. Our practice has developed a quality management system to meet the certification requirements of the International Organisation Standards ISO 9001:2015. These standards focus on the effectiveness of a practice's quality management system in meeting the needs of its customers.

Please let our reception staff know if you wish to provide feedback about our service – we welcome and appreciate your input.

FREE CHINESE LANGUAGE SERVICE

We are pleased to support patients with Mandarin, Cantonese and Malay language requirements through our Chinese Patient Liaison. Please call **02 9052 1886** for assistance with appointment bookings, queries and translation during appointments or surgical bookings (**translation service must be booked in advance**).

CATARACT, GLAUCOMA & RETINAL CLINIC

Our clinic provides a range of services, from general eye checks to the diagnosis and treatment of complex conditions. Minor procedures are performed on-site and surgical procedures are performed at our affiliated day surgery, Vision Day Surgery Chatswood.

CATARACT & LENS SURGERY

Cataract treatment involves keyhole surgery to remove the cloudy lens, which is then replaced with an artificial intraocular lens. Our surgeons perform both standard and laser cataract surgery and, in some cases, can help patients reduce or eliminate their dependence on reading glasses, depending on the type of lens used.

DIABETIC EYE DISEASE

Patients with type 1 diabetes and many of those with type 2 diabetes will usually develop eye complications within 20 years, such as cataracts, glaucoma or diabetic retinopathy. Our doctors have expertise in diagnosing and treating eye conditions in patients with diabetes.

GLAUCOMA

While glaucoma cannot be cured, treatments can generally control or slow disease progression. Increased pressure inside the eye causes damage to the optic nerve and leads to irreversible vision loss. Treatment involves lowering eye pressure by improving fluid drainage.

Most patients can manage their glaucoma with medicated eye drops, but sometimes another type of treatment is necessary. Your doctor may recommend laser treatment, filtration surgery or minimally invasive glaucoma surgery (e.g. iStent) to improve fluid drainage from the eye.

NERVE-RELATED VISION PROBLEMS

Our neuro-ophthalmologists conduct comprehensive examinations to diagnose nerve-related vision problems and provide a range of treatment options, including medication and surgery, depending on the condition.

RETINAL CONDITIONS

We treat all conditions that affect the retina (the light-sensitive tissue at the back of the eye) and macula (the part of the retina responsible for central vision). These include age-related macular degeneration, epiretinal membrane, macular hole, floaters, retinal detachment and diabetic retinopathy. Many of these conditions can be sight-threatening and require urgent treatment.

Your specialist may recommend eye (intravitreal) injections, retinal laser treatment or sutureless retinal surgery, depending on your condition.

CHILDREN'S EYE HEALTH

We offer comprehensive eye examinations for children and treat the range of paediatric eye conditions such as lazy eye (amblyopia), crossed eyes (strabismus), droopy eyelid (ptosis) and congenital cataracts and glaucoma.

GENERAL EYE HEALTH

Patients can also have a comprehensive eye check at our clinic, and treatment for more general eye conditions.

Global-Mark.com.au®

All medical and surgical procedures have potential complications. Check with your ophthalmologist before proceeding.

HIGHLY EXPERIENCED SPECIALISTS

Doctor partners

Dr Simon Chen

Vitreoretinal Surgery, Medical Retina

Dr Chen dedicates his practice to retinal and macular diseases and vitreoretinal surgery, including intraocular lens exchange.

Dr Mark Jacobs

Glaucoma, General Ophthalmology

Dr Jacobs focuses his practice on glaucoma and general ophthalmology.

Dr Rushmia Karim

Cataract and Laser Cataract Surgery, Paediatric Ophthalmology, Strabismus, Neuro-ophthalmology, Medical Retina, Pterygium

Dr Karim specialises in paediatric ophthalmology, as well as strabismus surgery and cataract surgery in adults and children. She also has expertise in neuro-ophthalmology and a variety of other eye conditions.

Dr David Ng

Cataract and Laser Cataract Surgery, Glaucoma, Diabetic Eye Disease, General Ophthalmology

Dr Ng is highly experienced in laser cataract surgery. He is a general ophthalmologist with a special interest in glaucoma and medical retinal diseases, including macular degeneration and diabetic eye disease. He also treats eyelid lesions.
